WAYNE WORKS, INC. • RICHMOND, IND., U. S. A.

NUMBERING SYSTEM — Parts listings are arranged for easy selection, in various letter groups to indicate the position of the parts in the body. These letter groups are listed in alphabetical order and each part number carries a letter symbol to correspond with the section in which it is used. The location of the parts as indicated by the letter symbol is as follows:

- "A"—all floor parts.
- "B"—all body parts (from the top of the windshield down).
- "C"—left front section parts (immediately to the left of the driver's seat).
- "D"—rear end parts (from the roof line down).
- "E"—all roof and electrical parts.
- "F"—both right and left side body parts.
- "G"—wheelhouse parts.
- "H"—entrance door parts.
- "J"—seats.
- "K"—exterior miscellaneous parts.
- "M"—interior miscellaneous parts.

SERIAL NUMBERS — Each and every Wayne body has a serial number assigned to it, and under this serial number complete records are kept as to the style of body, model, type, seating and all accessories included in the body at the time of delivery. Thus, it is very essential that the serial number of the body be included with each parts order. In this manner, then, any changes that might have occurred in production, during the delivery season, will be taken into consideration and necessary substitutions made to assure the customer's entire satisfaction. Many times changes are necessary in production, due to non-availability or scarcity of certain materials and when these occur they are recorded by body serial numbers. For the most satisfactory service **BE SURE TO SEND THE SERIAL NUMBER OF THE BODY WITH EACH PARTS ORDER.** In case of a major wreck, send photographs, if possible, to assist our parts interpreters in making up the proper materials lists in assisting you with the parts order.

SUBSTITUTIONS AND CHANGES — The Wayne Works reserves the right to make substitutions and changes where ever advisable or necessary, in line with its progressive policy. In many cases these changes might be engineering changes for the improvement of the particular part or they may be changes brought about by existing conditions, scarcity or unavailability of materials. In cases of substitution the customer will be properly notified and the correct instructions given for the use of the substitution.

DELIVERIES — Deliveries of shipments are usually from stock on the third or fourth working day following the receipt of the order but, under present conditions, shipping of a parts order may be delayed. Scarcity and unavailability of materials as well as volume of business determines the speed with which orders are shipped out. On occasion, it is necessary to ship partial orders with the part shortages following as "Back Orders" as shortly thereafter as possible. Invoicing is done only on the parts shipped.

SPECIAL PACKING — When special packing is required for unusual transport requirements, such special packing will be done on the customer's instructions at additional charge as the cost of the parts, as mentioned before, includes only that packing which is necessary to assure safe delivery in the United States.

METHODS OF SHIPPING — Unless otherwise specifically ordered, all parts orders will be shipped the cheapest way. It should be kept in mind that the cheapest way is not always the quickest and that where speed is desired, adequate shipping instructions should be given. Packing, crating or boxing is at the option of the Wayne Works but the utmost care will be taken to see that parts and materials are properly protected in transit.

METHODS OF PAYMENT — As is customary in the automotive field, all parts orders are automatically sent out on a c.o.d. basis unless specific arrangements have been made to the contrary. This is no reflection on the integrity or financial standing of the customer, but simply a matter of policy and custom which is generally observed in all branches of the automotive manufacturing industry.
